

DOWNLOAD TUTORIAL

Single Files - Macs

★ **Download single files** using a browser such as Chrome, Firefox, Internet Explorer or Safari on a PC:

- 1) Right-click on a video **file** name, then select "Save As", and press Enter.
- 2) In the dialogue window, Confirm the **file** name that will be stored, and the destination (your computer or attached drive such as a TV Collection). Press Enter again. The download should begin within seconds.

★ **Update your TV collection using a Mac:**

1. Download NTFS 3G:

The TVC that Mediaseva distributes uses a file system called NTFS. This file system cannot be used with Mac OS X unless some additional software is installed on the Mac. The software necessary to enable Mac OS X to read/write to NTFS file systems is free, and downloadable from this location:

http://www.apple.com/downloads/macosx/system_disk_utilities/ntfs3g.html

This download also contains the prerequisite MacFuse software, so you don't have to get that separately.

2. Once this is installed, go to the System Preferences panel, and check the NTFS-3G preference pane. It is possible that NTFS will have to be 'enabled' via this pane.
3. RESTART your Mac.
4. After installation, open the NTFS-3G prefPane and then connect the TVC to the Mac. In the prefPane click «Refresh list» so that the prefPane may include the TVC in its list.

If you want to increase your download speed you may also download "FLOX", a download manager/ accelerator, at: <http://mac.eltima.com/download-manager.html>
